Tutorial goals

Where we're starting from

Slide title

Larger column to the left.

Smaller column to the right.

Sample slide

Left column

This slide has two columns. They don't always have to have columns. It also has a titled block of content in the left column. Make sure you've always got a `::: notes` block after the slide content, even if it has no content.

Use `#` and `##` headers in the Markdown file to make level-1 and level-2 headings, `###` headers to make slide titles, and `####` to make block titles.
